

Module 6: Career Preparation

Activity

Activity: Experience Inventory

Do this before you build anything. You need raw material first.

Step 1. Brainstorm every job, volunteer role, responsibility, club, and skill you have had in the last four years. Do not filter. A two-week summer job counts. Watching your siblings counts. Being the person your family asks for tech help counts. List everything.

Step 2. Choose three items from your list and write each as one resume-style bullet point. Start each bullet with an action verb from the lesson, and include a specific detail or number wherever you can.

Step 3. Submit your full raw list plus your three bullet points.

Instructor feedback. I respond within 48 hours with a stronger version of whichever of your three bullets is the weakest, so you can see the technique applied to your own material before the graded assignment.
